Angular Development

Production Server vs
Development Server

Angular Development

StackBlitz
as a fallback

The screenshot displays the StackBlitz web-based development environment for an Angular application. The interface is divided into several sections:

- Left Sidebar:** Contains a file explorer showing the project structure. The 'src' directory is expanded, listing files like 'global_styles.css', 'index.html', 'main.ts', '.gitignore', 'angular.json', 'netlify.toml', 'package-lock.json', 'package.json', 'tsconfig.app.json', and 'tsconfig.json'. A button 'Open in bolt.new | AI →' is visible at the top of the sidebar.
- Main Editor:** Displays the 'main.ts' file with the following code:

```
1 import { Component, signal } from '@angular/core';
2 import { bootstrapApplication } from '@angular/platform-browser';
3
4 @Component({
5   selector: 'app-root',
6   template: `
7     <h1>Hello from {{ name }}!</h1>
8     <a target="_blank" href="https://angular.dev/overview">
9       Learn more about Angular
10     </a>
11     <button (click)="counter.set(counter() - 1)">--</button>
12     <span> Counter: {{ counter() }} </span>
13     <button (click)="counter.set(counter() + 1)">++</button>
14   `,
15 })
16 export class App {
17   name = 'Angular';
18   counter = signal(0);
19 }
20
21 bootstrapApplication(App).bootstrap().catch(err => console.error(err));
```
- Right Panel:** Shows the rendered application output. It displays 'Hello from Angular!' followed by a link 'Learn more about Angular' and a counter 'Counter: 0' with '--' and '++' buttons.
- Terminal:** Located at the bottom, it shows the following output:

```
| Initial total | 1.21 MB

Application bundle generation complete. [10.999 seconds] - 2026-05-04T15:32:41.436Z

Watch mode enabled. Watching for file changes...
NOTE: Raw file sizes do not reflect development server per-request transformations.
